RED CATTLE GENETICS

the new black and white

Cattle Breeding

are you at a crossroads with your breeding policy?

is the answer under your nose?

the new black and white

Cross Breeding is the **Red Hot** topic of the moment amongst cattle breeders.

The present economic climate dictates the need for **easy care cows**.

Many breeds and crosses are currently being touted from Scandinavia, new Zealand and California.

However a number of UK dairymen have already discovered the answers

..... the Dairy Shorthorn to cross with their Holsteins, its been tried and tested for the last 40 years.

Here's why:

- Improved fertility
 - excellent mobility
 - longevity
 - tighter calving intervals
- high level constituents •**
- lower cell counts •**
- good forage to milk converters •**

an overall adaptable, cost effective cow!

**Yewtree Alex
Donna**

yield: 3000
days: 100
fat: 4.53
prot: 3.40
cells: 35

**Yewtree Alex
Princess**

yield: 3000
days: 120
fat: 4.03
prot: 3.13
cells: 37

**Yewtree Alex
Ruby**

yield: 9956
days: 340
fat: 4.03
prot: 3.45
cells: 28
